DIY Concrete Bird Bath
with Fabric Drape Texture

Turn a Bucket & an Old Bag Into a Stunning Garden Centrepiece

No rigid mold needed. A real bird showed up the same day it was installed.

- ✓ Full materials list with costs
- ✓ Fabric drape technique — no mold needed
- ✓ Step-by-step instructions with real photos

Materials & What You'll Need

About This Project

Use an old hessian bag draped over an upturned bucket — pour concrete over it, cure 48 hours, then flip to reveal stunning organic draped folds. No mold needed. Looks like a $300 garden piece. A real bird visited ours the same day! Cost: $15–30. Difficulty: Beginner. Time: 30 min + 48h cure.

MATERIALS LIST

ITEM	QUANTITY	COST
Hessian/burlap sack or fabric	1 large	**Free / $5**
Plastic bucket (10–15 litre)	1	**$3–6**
Quikrete or Portland cement	1 bag (40 lb)	**$8–12**
Cooking spray (mold release)	1 can	**$3**
Rubber gloves + dust mask	Protection	**$3–5**
Wire mesh (optional reinforcing)	Small piece	**$4–6**
Sandpaper 120-grit	1 sheet	**$2**
Outdoor concrete sealer	1 small can	**$6–8**
Wheelbarrow or large tub	For mixing	**Own/borrow**
Trowel or gloved hands	For patting	**Own/borrow**
ESTIMATED TOTAL		**$15 – $30**

KEY TIP:

Soak the fabric in water before draping — dry fabric repels concrete and won't bond properly.
Use thick, loosely-woven burlap. Thin fabric tears under the concrete weight.
The weight of wet concrete shapes the fabric naturally — don't over-arrange it.

Step-by-Step Instructions

01 Set Up Your Base

Place bucket upside-down outdoors. Spray outside with cooking spray. Soak hessian fabric in water until fully saturated, wring lightly so it's wet but not dripping. Have your concrete mix ready.

02 Drape the Fabric

Drape wet fabric over the upturned bucket. Arrange natural folds around the sides — don't over-arrange, organic looks best. Tuck excess fabric under the bucket base to keep it in place.

03 Mix & Apply Concrete

Mix concrete to thick oatmeal consistency. Pat firmly into fabric using gloved hands — work from the centre outward. Build up 1–1.5 inches thick all over. Form a deeper bowl depression at the centre.

04 Cure 48 Hours

Mist lightly with water. Cover with plastic sheeting, keep in shade. Mist again after 24 hours. Do not move or flex during curing. The longer you wait (72h), the stronger the finished piece.

05 Reveal & Install

Peel fabric away carefully — the concrete holds the draped shape! Sand rough edges. Place on a stable garden base. Fill with water. Seal with outdoor concrete sealer. Birds will find it the same day. ■

Tips, Variations & Troubleshooting

✦ PRO TIPS

- **Use thick burlap:** Thin fabric tears. Hessian sacking or thick burlap works perfectly — old potato sacks are ideal.
- **Always soak fabric:** Wet fabric bonds with concrete. Dry fabric repels it and the concrete will fall off.
- **Pat, don't spread:** Press with a patting motion. Spreading motion disrupts the natural folds.
- **Cure in shade:** Direct sun dries concrete too fast causing cracks. Cover with plastic and cure in shade.
- **Seal before use:** Outdoor concrete sealer protects from frost and keeps it looking great for years.

✦ VARIATIONS

- Wire basket instead of bucket — creates a more intricate, open-weave texture
- Press pebbles into wet concrete for a stone-embedded finish
- Build a matching pedestal from a concrete tube mold
- Drill drainage holes before fully cured to use as a planter
- Add a solar fountain pump to the bowl for a moving water feature

✦ TROUBLESHOOTING

Q: Fabric falling off bucket
A: Tie string or use rubber bands to hold fabric in place while working.

Q: Concrete sliding off fabric
A: Mix too wet — should be thick oatmeal, not pourable. Add more dry cement.

Q: Cracks after curing
A: Dried too fast. Cure in shade, covered, misting every 12 hours.
